

POOR SCHEDULING

Long job wait times

jobs sit idle in the queue

Idle or overloaded servers

load is poorly distributed

High energy waste

power burned with no value

SLA violations

unhappy users, lost trust

Smart
Scheduler

BETTER SCHEDULING

Faster job turnaround

lower latency end-to-end

Balanced server load

resources used efficiently

Lower power bills

direct cost & carbon savings

Happy customers

SLAs met, trust retained

Data centers use 1–2% of global electricity
smarter scheduling directly cuts cost and carbon
